

Instruction to implement the RSS Feature (Blog)

We recommend that you implement the blog of the Journey service using the RSS function and integrate it into your Outlook.

We will use the blog to post our release notes and important information (functions, bugs) as well as general consumer management topics at regular intervals. We have described how this works step by step below. The whole process will take about 2-4min

Step 1: Please access the following website: <https://developer.sbb.ch/> (PROD) and go to the Journey-Service page
Note, that we will only publish our release notes on the blog of the productive environment.

Journey-Service 2.15.9

SBB Journey-Planner

(de:Fahrplanpublikation Personenverkehr SBB)

This is a stateless RESTful web-service for **timetable based public transportation routing** as provided by SBB Journey-Planner applications such as sbb.ch or SBB Mobile App.

The service-contract is restricted to **SBB internal consumers** or **accredited partners** and supports various and enhanced uses cases.

Before 'Sign up'

For new consumers:

1. This **service needs official approval** before granting any access, therefore send an e-mail (see 'Contact -> E-Mail') first with the subject: **Request: Sign Up Journey-Service**
2. Wait for the appropriate response e-mail and fill-in the attached **Questionnaire** and follow further steps given in the response.

Approved and 'Signed up' consumers

See **Contact** box

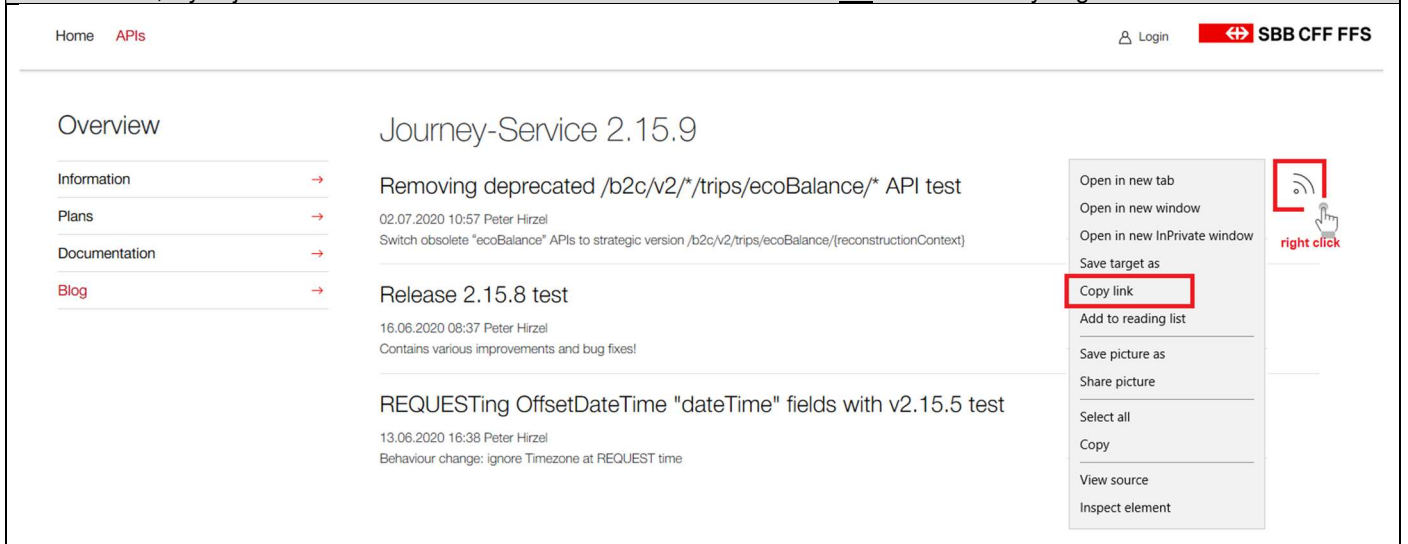

- **Homepage** for general infos about the service
- **Developer resources** for specific usage and concepts of Journey-Service

Remark:

- non SBB consumers might have problems to access our external confluence manual. If the Swagger-Doc is non sufficient, consider sending us an e-Mail with further questions.

[Sign up](#)

Step 2: When you have navigated to the Blog subpage, copy the RSS link;
For this, **right click** on the RSS icon and choose "copy link"
Please know, if you just double click on the icon a download will start. This is not the correct way to get the RSS link.
